

CBD JEAN GUY

CBD Jean Guy delivers the same powerful medicine Jean Guy is known for while maintaining its invigorating citrus skunky smell at a 1:1 ratio, THC:CBD. It grows quickly with thick side branches like the Jean Guy, has conical buds and plenty of trichomes.

Genetics – Cannatonic (s) X Jean Guy (f)

Variety – Sativa

Seed – Feminized

Analysis – THC 9.51%, CBD 11.08%, CBG 0.75%, CBN 0.03%

Terpenes – Limonene+, Linalool, Myrcene, Caryophyllene, Humulene

Flowering Time – 9 weeks

HIGHLO

This 20:1 high CBD low THC Cannatonic IBL strain is high on healing properties and low on psychoactive effects. Known to reduce physical and mental aches and pains, the Highlo certainly induces a calm and relaxed state of mind. She has beautiful light green flowers and a fruity aroma with distinctive cherry undertones.

Independent laboratory tests show that 94% of plants have high CBD content and THC values less than 1%. 6% of plants have high CBD content and THC values greater than 1%.

Genetics – Cannatonic IBL

Variety – CBD Rich

Seed – Feminized

Analysis Avg. – THC 0.58%, CBD 11.36%, CBG 0.75%, CBN 0.03%

Terpenes – Myrcene, Limonene, Humulene, Caryophyllene, Linalool

Flowering Time – 8-9 weeks

JEAN GUY

A Quebec-born legend made famous by the Montreal Compassion Club, the Jean Guy is a sativa dominant cross, a pungent euphoriant with a citrus/skunk smell indicative of its strong buzz. It grows quickly producing thick lateral branches and heavy colas. Jean Guy was featured in the first ever marijuana ad in the New York Times.

Variety – Sativa / Indica (60 / 40)

Seed – Feminized

Analysis – THC 25.00%, CBD 1.40%, CBN 0.08%

Terpenes – Caryophyllene+, Myrcene, Ocimene, Limonene, Guaiol

Flowering Time – 10 weeks

DIGWEED

Digweed, another House of the Great Gardener creation, is a Sweet Tooth/GG1 cross named after our 20 year-old-cat who loves to eat weed. Sweet Tooth delivers pain relief and a blissful stone. GG1 makes this a fast branching, early finisher with big, tight, purrrfect nugs.

Genetics – Sweet Tooth (f) x GG1 (m)

Variety – Sativa / Indica

Seed – Feminized or Regular

Analysis– THC 16.19%, CBD 0.20%, CBC 0.22%, CBG 0.39%

Terpenes – Myrcene+, Terpinolene+, Caryophyllene, Ocimene, a-Pinene

Flowering Time – 7 weeks

JACK EH!

A BC favourite for years, this sativa cross is a serious producer. Crazy vegetative growth means you can expect it to triple in size upon flowering with buds covered in loads of crystal.

Genetics – Jack Herer

Variety – Sativa / Indica

Seed – Feminized

Analysis – THC 11.27%, CBD 0.02%

Terpenes – a-Pinene+, Myrcene+, B-Pinene, Caryophyllene, D-Limonene

Flowering Time – 10-11 weeks

SUNSHINE

A favourite for many reasons, this sativa has an uplifting high and lemony sweet smell that turns heads. She has a conical shape and grows vigorously through the vegetative state and flowering period. Could be considered a motivator if you're an experienced smoker; or, this resinous beauty might just knock you on your ass.

Genetics – Sweet Skunk

Variety – Sativa / Indica (70 / 30)

Seed – Feminized

Flowering Time – 10-11 weeks

BARBARA BUD

Barbara Bud is a superstar for so many reasons. Named after a wellknown CBC radio host, this Shishkaberry/GG1 cross is easy to grow and finishes quickly. Best of all, she produces super frothy nugs—extreme trichome coverage—and an unbelievably fruity fragrance that makes for some world-class hash.

Genetics – Shishkaberry (f) X GG1 (m)

Variety – Sativa / Indica

Seed – Feminized or Regular

Analysis – THC 11.75%, CBD 0.12%, CBC 0.24%, CBG 1.12%

Terpenes – D-Limonene, Guaiol, Selina-3, 7(11)- diene, Caryophyllene, Valencene

Flowering Time – 7 weeks

ORANGE BARB

We knew combining Barbara Bud with the Tangie would create a fantastic plant with a striking fragrance and flavour profile, and the Orange Barb nails it. An aroma of freshly peeled blood oranges emanates from the flower and dominates the room, while the taste is floral, woody and complex. Like Barbara Bud, Orange Barb has a great growth structure, above average yield, and social, uplifting and creative effects.

Genetics – Barbara Bud (s) x Tangie (f)

Variety – Sativa / Indica

Seed – Feminized

Analysis – THC 15.43%, CBD 0.04%, CBG 0.93%, CBV 0.11%

Terpenes – Linalool+, Caryophyllene+, Myrcene, Limonene, Humulene

Flowering Time – 8-9 weeks

GG 1

One of our favourites, this is a classic Afghani - a pure medicinal indica – our top painkiller. The buds are beautiful with a lovely deep hash fragrance and a smooth, smoky flavour. The plant has a fantastic pine-tree structure and is easy to grow. What more can you ask for? How about potential for high yields with lots of resin.... We love this strain.

Genetics – Afghani #1

Variety – Pure Indica

Seed – Feminized or Regular

Analysis – THC 19.93%, CBD 0.03%, CBG 0.22%, CBV 0.92%

Terpenes – Caryophyllene+, Terpinolene, Humulene, a-Bisabolol, Ocimene

Flowering Time – 8 weeks

CBD AFGHANI

CBD Afghani combines a classic Afghani with the highly medicinal Cannatonic in a 1:1 ratio. The smell is earthy and sweet and while the powerful body stone relieves pain, the mind remains unclouded. Yield is above average. The buds are greasy, chunky and dense and absolutely covered in trichomes.

Extraction artists note: CBD Afghani can provide a 20% return.

Our tests reveal 97% high CBD seed, further testing is required to verify high CBD.

Genetics – Cannatonic (f) X GG 1 (m)

Varietà – Indica, CBD Rich

Seme – Feminized

Analisi – THC 10.1%, CBD 10.93%, CBC 0.58%, CBG 0.34%

Terpenes – Caryophyllene+, Humulene, D-Limonene, Myrcene, a-Bisabolol

Tempo di fioritura – 8-9 weeks

RENÉ

Another Canadian legend, the René is rumoured to come from a Himalayan indica crossed with a Skunk#1 male. She has beautiful emerald-green popcorn style buds, smells strong and fruity, and she's super stony.

Genetics – Himalyan Indica (f) X Skunk #1 (m)

Variety – Indica / Sativa

Seed – Feminized

Analysis – THC 16%, CBD 1.01%, CBC 1.01%, CBN 0%

Terpenes – Myrcene+, Caryophyllene, Limonene, Ocimene, Linalool

Flowering Time – 7-8 weeks

BARBARELLA

Barbarella is a beautiful hybrid. Emerald green leaves turn a dazzling reddish orange during final weeks, golf ball-sized buds and single cola dominant traits are all from René's line. The fruitiness of both strains combines to create a new aroma reminiscent of strawberry ice-cream. Barbarella produces plenteous trichomes, like Barbara Bud, and she packs a more powerful stony punch. High yielding strain.

Genetics – Barbara Bud (s) x René (f)

Variety – Indica / Sativa

Seed – Feminized

Analysis – THC 19.02%, CBD 0.05%, CBG 2.90%, CBV 0.12%

Terpenes – Myrcene+, Caryophyllene, Humulene

Flowering Time – 7-8 weeks

HAOMA

This lovely lady is a gem in the House of the Great Gardener's collection. We crossed the Purps with the GG1 to give the Purps a stronger structure, and the best phenotypes were put to the members of a local compassion club to choose their favourites. By popular demand we created an indica dominant cross with a super fruity aroma. She flowers early and produces small but heavy tight nugs.

Genetics – Purps (f) x GG1 (m)

Variety – Indica / Sativa (70 / 30)

Seed – Feminized or Regular

Analysis – THC 14.00%, CBD 0.20%, CBN 0.04%

Terpenes – Ocimene+, (-)-B-Pinene+, D-Limonene, B-Pinene, Myrcene

Flowering Time – 7-8 weeks

CBD RENÉ

CBD René is an award winning combination of flavor and high CBD. René's legendary berry smell, licorice flavour and perfect popcorn buds shine through, while the Cannatonic in her delivers potent CBD at a 1:1 ratio, THC to CBD. To top it off, she produces quality, full-melt resin. Our first CBD rich strain and we're proud of her.

Testing required to verify high CBD. Our tests reveal 72%, roughly 7 out of 10 seeds.

Genetics – Cannatonic (f) X René (m)

Variety – Indica / Sativa

Seed – Feminized

Analysis – THC 6.17%, CBD 6.38%, CBC 0.35%, CBG 0.24%

Terpenes – Myrcene+, D-Limonene, Guaiol, Selina-3,7(11)-diene, Eudesmol

Flowering Time – 7-8 weeks
